Types of Milk Suitable for Cheese Making

- Sheep's Milk: Richer in fat and protein; ideal for aged cheeses

The manual advises sourcing milk from trusted local farms or dairy suppliers to ensure purity and freshness. It also covers the importance of maintaining proper milk storage conditions and avoiding contamination.

Preparing Milk for Cheese Making

- Heating: Gentle heating to the appropriate temperature for coagulation
- Standardization: Adjusting fat content if necessary
- Adding cultures: Introducing beneficial bacteria to develop flavor and texture
- Adding coagulants: Using rennet or plant-based alternatives for curd formation

Coagulation and Curd Formation

This critical phase determines the texture and quality of the final cheese product.

Types of Coagulants

- Animal Rennet: Traditional choice, derived from calf stomachs
- Vegetable Rennet: Suitable for vegetarian cheese options
- Microbial Rennet: Lab-produced enzymes with consistent results

The handbook emphasizes selecting the appropriate coagulant based on the cheese type and dietary considerations.

Steps for Coagulation

- Heat the milk to the specified temperature as per the recipe
- Add the coagulant gradually while gently stirring
- Allow the milk to set undisturbed until a firm curd forms
- Test the curd's firmness with a knife or finger
- Cut the curd into uniform pieces to facilitate whey separation

Cutting and Cooking the Curds

Proper handling during this phase impacts moisture content and cheese texture.

Cutting the Curds

- Use a cheese harp or knife to cut the curd into small, uniform cubes
- Gentle, even cuts prevent damaging the curd structure

Cooking the Curds

- Gradually heat the curds to encourage whey expulsion
- Stir gently to prevent curd breakage
- Maintain precise temperatures as specified in the recipe

The handbook stresses patience during this process to achieve the desired moisture level and firmness.

Draining, Molding, and Pressing

Once the curds are cooked, the next steps involve removing whey and shaping the cheese.

Draining

- Transfer curds into cheesecloth-lined baskets or molds
- Allow whey to drain naturally or apply gentle pressure

Molding and Pressing

- Shape the curds into desired forms
- Apply appropriate pressure to expel excess whey
- Pressing times vary depending on cheese type, from a few hours to several days

The manual highlights the importance of hygiene during these steps to prevent contamination.

Salting and Flavoring Techniques

Salting not only enhances flavor but also acts as a preservative.

Methods of Salting

- Dry Salting: Rubbing salt directly onto cheese surfaces
- Brining: Submerging cheese in saltwater solutions

Flavoring Additions

- Herbs, spices, or smoked elements can be incorporated during or after the shaping process
- Experimentation with flavorings is encouraged within safe, hygienic practices

Aging and Maturation

Aging imparts complexity and character to cheese.

Conditions for Aging

- Temperature: Typically between 8°C and 15°C (46°F - 59°F)
- Humidity: High humidity levels (80-90%) to prevent drying
- Airflow: Good ventilation to discourage mold growth

Timing
