Key Concepts in Financial Accounting

A solid grasp of core concepts is crucial for mastering financial accounting. Here are some of the most important ones:

1. The Accounting Equation

The foundation of accounting is the accounting equation:

$$\text{Assets} = \text{Liabilities} + \text{Equity}$$

This equation must always be in balance and reflects the company's resources and claims against those resources.

2. Double-Entry Bookkeeping

Every financial transaction affects at least two accounts, maintaining the balance of the accounting equation:

- Debits and credits are used to record transactions.
- For every debit, there must be an equal credit.

3. The Accounting Cycle

The process of financial accounting follows a cycle:

- Identify and analyze transactions
- Record transactions in the journal
- Post journal entries to the ledger
- Prepare unadjusted trial balance
- Make adjusting entries
- Prepare adjusted trial balance
