Understanding Selenium WebDriver Framework

What is Selenium WebDriver?

Selenium WebDriver is an open-source tool that enables automation of web browsers. It provides a programming interface to create and execute test scripts that mimic user actions such as clicking buttons, entering text, navigating pages, and verifying content. Unlike earlier Selenium tools like Selenium IDE or Selenium RC, WebDriver offers a more modern, flexible, and browser-native approach to automation.

Key Features of Selenium WebDriver

- Supports multiple programming languages including Java, C, Python, Ruby, and JavaScript.
- Compatible with all major browsers such as Chrome, Firefox, Edge, Safari, and Opera.
- Allows direct interaction with browser elements using native browser support.
- Supports dynamic web pages with AJAX and JavaScript-heavy content.
- Enables integration with testing frameworks like TestNG, JUnit, NUnit, and others.
